PPE & FIELD SAFETY

Safety Before Deployment.

Engineering Solutions

1

WEAR YOUR PPE

PPE CHECKLIST

- ✓ Helmet
- ✓ Reflective Jacket
- ✓ Gloves
- ✓ Safety Boots
- ✓ Eye Protection

2

LADDER SAFETY

LADDER SAFETY TIPS

- ✓ Place ladder on firm, level ground.
- ✓ Maintain 3 points of contact.
- ✓ Do not overreach.
- ✓ Keep ladder clean and free from damage.
- ✓ Use the right ladder for the job.

3

TRAFFIC CONE PLACEMENT

4

ELECTRICAL HAZARD AWARENESS

ELECTRICAL SAFETY RULES

- ⚡ Always assume power lines are live.
- ⚡ Maintain safe distances.
- ⚡ Use insulated tools near electricity.
- ⚡ Report any damaged lines immediately.

5

TOOL SAFETY CHECKS

INSPECT YOUR TOOLS

KEEP TOOLS CLEAN AND DRY

USE THE RIGHT TOOL FOR THE JOB

STORE TOOLS SAFELY

REPORT FAULTY TOOLS

UNDERSTANDING FIBRE NETWORKS

Basic Fibre Infrastructure.

Before we build and connect, we must understand the network.

1 FIBRE POLES

Fibre poles carry cables high above the ground to connect communities over long distances.

2 DISTRIBUTION BOXES

Distribution boxes split and manage fibre cables to feed different routes and customers.

3 BACKBONE ROUTES

Backbone routes are the main high-capacity fibre paths that carry data across towns, cities and regions.

4 HOME DROP CABLES

Drop cables connect the main network to homes and businesses, bringing internet closer to the user.

5 FIBRE CABINETS

Fibre cabinets house critical equipment that manages, protects and distributes fibre connections.

HOW IT ALL WORKS TOGETHER

Backbone connects major locations

Fibre poles and distribution boxes deliver the signal

Drop cables bring fibre to homes and businesses

Fibre enables fast, reliable internet for everyone

KEY TAKEAWAY

Every part of the fibre network plays a vital role in delivering reliable, high-speed connectivity.

KNOW THE NETWORK

WORK WITH PURPOSE

BUILD CONNECTIONS

DELIVER EXCELLENCE

UNDERSTAND TODAY. CONNECT TOMORROW.

PREPARING FOR FIELD WORK

Daily Deployment Preparation.

Engineering Solutions

Good preparation today leads to safe, efficient and successful jobs in the field.

Know the job.
Know the site.
Serve the customer better.

1 TOOL INSPECTION

Check all tools and equipment to ensure they are clean, complete and in good working condition.

Right tools.
Right condition.
No shortcuts.

2 CHECKING WORK ORDERS

Review work orders, site information and customer details to understand the job requirements.

WORK ORDER

Customer: Green View Estate
Job Type: New Fibre Installation
Location: House 12
Priority: High
Tasks:
☒ Install drop cable
☒ Splice & terminate
☒ Test and handover

3 TEAM COORDINATION

Brief the team, assign roles and ensure everyone understands the plan and safety requirements.

Let's work as one team, stay safe and get the job done right.

TEAM ROLES

- Team Lead
- Splicer
- Installer
- Trainee
- Driver

4 ROUTE PLANNING

Plan the best route, check access points, identify potential challenges and estimate time.

Plan the route.
Avoid delays.
Deliver on time.

CHECK POINTS

- ☒ Access points
- ☒ Road conditions
- ☒ Traffic areas
- ☒ Power lines
- ☒ Existing network
- ☒ Safety risks

5 LOADING FIBRE EQUIPMENT

Load all required tools, materials and safety equipment properly into the vehicle.

LOAD CHECKLIST

- ☒ Splicing tools & machine
- ☒ OTDR & test equipment
- ☒ Fibre cable & accessories
- ☒ Ladders & safety gear
- ☒ Tool kits & consumables
- ☒ Traffic cones & signage
- ☒ PPE & first aid kit
- ☒ Work orders & documents

CHECK. LOAD. SECURE. GO.

PREPARATION PREVENTS PROBLEMS.

BE PREPARED

WORK SAFE

WORK TOGETHER

SAVE TIME

DELIVER QUALITY

PREPARE TODAY.
PERFORM BETTER.
CONNECT TOMORROW.

FIBRE CABLE HANDLING

Proper Cable Management.

Handle fibre with care today, deliver perfect connections every day.

1 CARRYING FIBRE SAFELY

Carry fibre cables on your shoulder or use a cable drum. Keep the coils neat and secure to prevent kinks, twists and damage.

DO

- ✓ Keep coils neat
- ✓ Support the cable
- ✓ Use both hands
- ✓ Use a cable drum for long runs

2 AVOIDING BENDS AND DAMAGE

Bending or crushing fibre cables can cause micro-bends, signal loss and even complete failure.

DO

- Maintain a minimum bend radius.
- During installation: $\geq 10 \times$ cable diameter
 - Long term operation: $\geq 15 \times$ cable diameter

3 CABLE ROUTING PRACTICES

Route cables properly to protect them from environmental damage and physical impact.

DO

- ✓ Use the correct pathways
- ✓ Avoid high heat areas
- ✓ Keep away from sharp edges
- ✓ Follow the most direct and safe route

DON'T

- ✗ Do not expose cable to unnecessary risk
- ✗ Do not run beside power lines

4 SECURING FIBRE CORRECTLY

Secure cables at regular intervals to enable a neat, safe and long-lasting installation.

DO

- ✓ Use cable clamps or ties
- ✓ Secure at proper intervals
- ✓ Allow a service loop for maintenance
- ✓ Keep terminations protected

TYPICAL INTERVALS

- Vertical runs: every 1.2m
- Horizontal runs: every 1m
- Near terminations: within 30cm

5 STORE CABLES CORRECTLY

Improper storage can damage the fibre and compromise performance.

DO

- ✓ Store in a clean, dry place
- ✓ Keep away from sunlight and heat
- ✓ Keep reels upright
- ✓ Protect cable ends

DON'T

- ✗ Do not leave cables unprotected
- ✗ Do not throw or drop cable reels

KEY TAKEAWAYS

Handle with care

Avoid bends and damage

Route properly

Secure correctly

Store safely

**GOOD CABLE HANDLING
MEANS STRONGER
CONNECTIONS AND
HAPPIER CUSTOMERS.**

PROTECT THE FIBRE.

PROTECT THE NETWORK.

PROTECT THE EXPERIENCE.

HANDLE IT RIGHT. INSTALL IT RIGHT. GET IT RIGHT.

POLE CLIMBING & HEIGHT SAFETY

Working at Heights.

Work at height the right way. Every step matters.

1 LADDER POSITIONING

Correct ladder positioning provides a stable and safe access point.

DO

- ✓ Firm, level ground
- ✓ Correct angle (4:1 rule)
- ✓ Top 1m above landing point
- ✓ Secure the base

DON'T

- ✗ Unstable ground
- ✗ Wrong angle
- ✗ Against weak points (doors, windows)

4:1 RULE

For every 4ft up, place the ladder 1ft away from the pole.

2 POLE CLIMBING GEAR

Use the right climbing gear and inspect it before every use.

Safety Belt (Body Belt)

Pole Strap (Adjustable)

Climbing Spikes (Gaffs)

Tool Pouch

DO

- ✓ Inspect gear before use
- ✓ Keep gear clean and in good condition
- ✓ Use gear designed for pole climbing

DON'T

- ✗ Use damaged or worn gear
- ✗ Share personal gear
- ✗ Modify gear

3 SAFETY HARNESS USAGE

Always wear and connect your harness. It could save your life.

DO

- ✓ Wear full body harness
- ✓ Always stay connected
- ✓ Use shock absorbing lanyard
- ✓ Anchor above working level

DON'T

- ✗ Work unconnected
- ✗ Anchor below your waist
- ✗ Use knots instead of proper hooks

4 CLIMBING THE POLE SAFELY

Follow the three-point contact rule at all times.

1

Attach pole strap around the pole.

2

Step up with both gaffs. Keep your body close to the pole.

3

Stand upright and move the strap up. Repeat.

5 TEAM SPOTTING PROCEDURES

Never climb alone. Your team is your safety net.

We've got you. Climb safe.

Clear the area. Watch the climber. Communicate.

DO

- ✓ Assign roles (Climber, Spotter, Ground Controller)
- ✓ Use tag line to control tools
- ✓ Keep area clear of people and vehicles
- ✓ Communicate at all times
- ✓ Stop work if conditions are unsafe

DON'T

- ✗ Allow distractions
- ✗ Stand directly under the climber
- ✗ Ignore hazards (weather, traffic, power lines)
- ✗ Rush the job

HEIGHT SAFETY CHECKLIST

WEAR YOUR PPE

USE EQUIPMENT CORRECTLY

STAY CONNECTED AT ALL TIMES

MAINTAIN THREE POINT CONTACT

WORK AS A TEAM

STOP IF UNSAFE

NO SHORTCUT IS WORTH AN ACCIDENT.

PLAN AHEAD. WORK SAFE. RETURN HOME.

FIBRE SPLICING BASICS

Splicing Operations.

Good splicing delivers strong, reliable connections. Every time.

1 FIBRE PREPARATION

Proper preparation is key to a low-loss splice.

1 Strip outer jacket (30-40mm)

2 Remove strength members

3 Strip coating (20-30mm)

4 Clean bare fibre

2 CLEANING FIBRE STRANDS

Clean fibre ensures a high-quality splice with minimal loss.

HOW TO CLEAN

1 Moisten lint-free wipe with fibre cleaner

2 Wipe the fibre from the center outwards

3 Use a fresh section of wipe for the second fibre

4 Inspect the fibre end to ensure it's clean

3 FUSION SPLICING PROCESS

Fusion splicing precisely joins two fibre ends using heat and alignment.

1 Place fibres in the splicer

2 Fibres are aligned automatically

3 Arc fusion joins the fibres

4 Splice is tested (low loss)

4 PROTECTIVE SLEEVES

Protect the splice with a heat shrink sleeve for strength and environmental protection.

1 Slide sleeve over one side of the splice

2 Center the splice inside the sleeve

3 Heat the sleeve until it shrinks fully

4 Allow to cool

5 SPLICE CLOSURES

Splice closures protect splices from moisture, dust and physical damage.

1 Arrange and store splices neatly in the tray

2 Secure fibres with management clips

3 Close the closure and check the seal

4 Mount closure securely in place

6 FINAL CHECK

Test and document every splice.

FINAL CHECKLIST

- ✓ Splice loss is within limit (≤ 0.1 dB typical)
- ✓ Splice is mechanically protected
- ✓ Closure is sealed properly
- ✓ Fibres are routed neatly
- ✓ Job is documented

KEY TIPS FOR QUALITY SPLICING

Keep your work area clean.

Always clean fibre properly.

Use the right tools.

Protect every splice.

Test and record results.

**PRECISION TODAY.
PERFORMANCE
TOMORROW.**

**STRONG CONNECTIONS START
WITH STRONG PRACTICES.**

**TAKE PRIDE
IN EVERY SPLICE.**

**QUALITY WORK. RELIABLE NETWORKS.
HAPPY CUSTOMERS.**

SPLICING IT RIGHT. CONNECTING IT STRONG.

TESTING THE FIBRE LINK

Fibre Testing Procedures.

We test every link to ensure performance, quality and reliability.

1 OTDR TESTING

OTDR (Optical Time Domain Reflectometer) identifies faults, splices, connectors and loss events along the fibre link.

OTDR TEST REVEALS:

- Distance to events
- Splice points
- Connector losses
- Breaks or bends
- Overall link loss

2 POWER METER USAGE

Use a power meter and light source to measure optical power levels across the link.

BEST PRACTICES

- ✓ Use correct wavelength (1310nm / 1550nm)
- ✓ Inspect and clean all connectors
- ✓ Use reference cords
- ✓ Record both wavelengths

3 SIGNAL VALIDATION

Verify that the signal meets design requirements and is within acceptable limits.

PASS / FAIL GUIDE

Typical Power Levels (dBm)

- ✓ Excellent: -8 to -18 dBm
- ✓ Acceptable: -18 to -25 dBm
- ⚠ Marginal: -25 to -28 dBm
- ✗ Fail: < -28 dBm

CHECK FOR:

- ✓ Sufficient power
- ✓ Low total loss
- ✓ Stable readings
- ✓ No active faults

4 IDENTIFYING LOSSES

OTDR traces help identify and locate loss events so we can take action and improve the link.

SUMMARY

Wavelength	Link Length	Total Loss	ORL	End Loss
1550 nm	4.832 km	1.48 dB	37.6 dB	0.32 dB

5 RECORDING TEST RESULTS

Accurate records ensure quality work, support reporting and simplify future maintenance.

RECORD CLEARLY

- ✓ Date / Time
- ✓ Job / Site ID
- ✓ Fibre route / Cable ID
- ✓ Test wavelength(s)
- ✓ Power readings
- ✓ OTDR trace saved
- ✓ Pass / Fail result
- ✓ Technician name
- ✓ Notes / Actions

6 DOCUMENT & REPORT

Document results and share with the team and client. Good documentation builds trust and keeps networks running strong.

KEY TAKEAWAYS

Test every link

Know your limits

Find losses early

Record accurately

Deliver quality connections

TESTED TODAY.
TRUSTED TOMORROW.
STRONGER CONNECTIONS
FOR EVERYONE.

TEST WITH CARE.

REPORT WITH PRIDE.

DELIVER WITH CONFIDENCE.

MEASURE. VERIFY. CONNECT. EMPOWER.

HOME INTERNET INSTALLATION

Residential Installation.

Great service starts with a smooth installation and a happy customer.

1 ARRIVING AT CUSTOMER HOME

We're here to connect you to fast, reliable fibre internet.

CHECKLIST

- ✓ Greet the customer
- ✓ Confirm appointment
- ✓ Explain the process
- ✓ Ensure access is safe
- ✓ Set expectations

2 INDOOR CABLE ROUTING

Route the fibre cable neatly and safely from the entry point to the preferred location.

BEST PRACTICES

- ✓ Use the shortest safe route
- ✓ Avoid electrical interference
- ✓ Secure with clips or trunking
- ✓ Keep bends gentle
- ✓ Maintain a neat finish

3 ROUTER SETUP

Install and configure the router for optimal performance.

- 1 Connect fibre cable to ONT/router
- 2 Power on the device
- 3 Configure WiFi name (SSID) and password
- 4 Update firmware if required
- 5 Ensure all indicator lights are normal

4 WIFI TESTING

Test the connection to ensure customers get the speed and stability they expect.

TEST CHECKLIST

- ✓ Check internet connectivity
- ✓ Run speed test
- ✓ Test on multiple devices
- ✓ Check WiFi coverage
- ✓ Ensure stability (no drops)

5 CUSTOMER EDUCATION

Empower the customer with knowledge about their service.

TALK POINTS

- ✓ Explain WiFi network and password
- ✓ Show how to connect devices
- ✓ Share tips for better WiFi performance
- ✓ Provide support contact details
- ✓ Answer any questions

6 JOB COMPLETE

A satisfied customer is our best connection.

FINAL CHECK

- ✓ Confirm customer satisfaction
- ✓ Clean up the work area
- ✓ Record job details and notes
- ✓ Thank the customer

THANK YOU!

Enjoy your fast, reliable fibre internet!

KEY TAKEAWAYS

PROFESSIONAL SERVICE

NEAT AND SAFE INSTALLATION

STRONG AND STABLE CONNECTION

CUSTOMER EMPOWERMENT

QUALITY YOU CAN TRUST

WE DON'T JUST INSTALL INTERNET.
WE CONNECT HOMES.
WE SUPPORT LIVES.

OUR CONNECTION.
YOUR WORLD.

WE CARE. WE CONNECT.
WE DELIVER.

BETTER CONNECTIONS.
BETTER LIVES.

CONNECTING YOU TO WHAT MATTERS MOST.

OFFICE INSTALLATIONS

Business Connectivity Setup.

Reliable business connections start with professional installations.

1 STRUCTURED CABLING

Plan and install structured cabling for a clean, scalable and reliable network.

BEST PRACTICES

- ✓ Follow cable management standards
- ✓ Use labeled drop points
- ✓ Maintain proper bend radius
- ✓ Test each cable before use
- ✓ Keep installations neat and tidy

2 RACK INSTALLATION

Install and organize network equipment in racks for optimal performance and easy maintenance.

RACK CHECKLIST

- ✓ Secure rack properly
- ✓ Install power distribution
- ✓ Mount patch panel and switches
- ✓ Organize and label cables
- ✓ Ensure proper ventilation

3 OFFICE WIFI DEPLOYMENT

Deploy business-grade WiFi access points for seamless coverage across the office.

TIPS

- ✓ Place APs centrally
- ✓ Avoid obstructions
- ✓ Ensure even coverage
- ✓ Test signal strength

4 TEAM COORDINATION

Work together and communicate to ensure a smooth and efficient installation.

PLAN

- CABLE ROUTES
- RACK SETUP
- WIFI LOCATIONS
- TESTING

TEAM CHECKLIST

- ✓ Review the plan
- ✓ Assign tasks
- ✓ Share updates
- ✓ Support each other
- ✓ Safety first

5 TESTING OFFICE CONNECTIVITY

Test and validate the entire network to ensure speed, stability and reliability.

TEST CHECKLIST

- ✓ Check internet speed
- ✓ Verify device connectivity
- ✓ Test internal network access
- ✓ Check WiFi performance
- ✓ Verify redundancy (if applicable)

6 INSTALLATION COMPLETE

A connected office is a productive office.

FINAL CHECK

- ✓ Customer walk-through completed
- ✓ All tests passed
- ✓ Documentation handed over
- ✓ Customer satisfied
- ✓ Job done right!

THANK YOU!

Powering your business success.

KEY TAKEAWAYS

PLAN CAREFULLY

INSTALL PROPERLY

DEPLOY SMART WIFI

WORK AS A TEAM

TEST THOROUGHLY

DELIVER WITH QUALITY

**STRONG CONNECTIONS.
STRONG BUSINESSES.
WE BUILD THE NETWORKS
THAT KEEP YOU MOVING
FORWARD.**

BUILT WITH EXPERTISE.
DELIVERED WITH PRIDE.

EMPOWERED TEAMS.

RELIABLE NETWORKS.
LASTING IMPACT.

CONNECTING TODAY. EMPOWERING TOMORROW.

TROUBLESHOOTING CUSTOMER ISSUES

Diagnosing Faults.

Stay calm.
Follow the process.
Find the fault.
Fix it right.

1 SLOW INTERNET COMPLAINTS

Listen to the customer and gather details about the issue.

The internet is very slow since yesterday.

ASK THESE QUESTIONS

- ✓ When did the issue start?
- ✓ Is it all devices or one device?
- ✓ Any recent changes (equipment, power cuts, weather)?
- ✓ Is it slow all the time or at certain times?
- ✓ Any error lights on the router?

TIP Good questions lead to a faster solution.

2 CHECKING FIBRE SIGNAL

Use a power meter to check the optical signal level.

GOOD SIGNAL RANGE

-8 dBm (Best)	-8 dBm to -25 dBm (Acceptable)	Below -25 dBm (Poor)
------------------	-----------------------------------	-------------------------

CHECKLIST

- ✓ Ensure clean fibre connectors
- ✓ Check signal level (Target: -8 to -25 dBm)
- ✓ Verify ONT is powered
- ✓ Record readings
- ✓ If out of range, continue troubleshooting

3 ROUTER TROUBLESHOOTING

Check the router and WiFi for proper operation.

CHECK THESE ITEMS

- ✓ Power light on
- ✓ Internet/WAN light on
- ✓ WiFi light on
- ✓ Try rebooting the router
- ✓ Check WiFi settings
- ✓ Update firmware if needed

TIP Most issues are fixed with a simple reboot.

4 CABLE INSPECTION

Inspect all cables and connections for damage, loose ends or bends.

INSPECT FOR

- ✓ Bent or crushed cables
- ✓ Loose or dirty connectors
- ✓ Damaged fibre jacket
- ✓ Improper cable routing
- ✓ Water ingress or moisture

TIP A small damage can cause a big problem.

5 FAULT ISOLATION

Isolate each part of the connection to find the root cause.

HOW TO ISOLATE

- 1 Test from the ONT – if signal is good, move to router.
- 2 Test with a different LAN cable or device.
- 3 Bypass splitters or extenders if possible.
- 4 Identify the section where the issue starts.

TIP Divide the path. Test each point. Find the fault.

6 RESOLVE & CONFIRM

Fix the issue and confirm the connection is working perfectly.

FINAL CHECKLIST

- ✓ Internet speed is normal
- ✓ All devices working
- ✓ WiFi signal strong
- ✓ No error lights
- ✓ Customer satisfied
- ✓ Document the issue and solution

CUSTOMER SATISFIED?
That's a job well done!

KEY TAKEAWAYS

LISTEN CAREFULLY

CHECK SYSTEMATICALLY

TEST EACH STEP

ISOLATE THE FAULT

FIX & CONFIRM

**PROBLEMS DON'T STAY.
SOLUTIONS DON'T EITHER.
WE KEEP CONNECTIONS STRONG.**

**QUICK RESPONSE.
BETTER EXPERIENCE.**

**SOLVE TODAY.
CONNECT TOMORROW.**

**HAPPY CUSTOMERS.
STRONG RELATIONSHIPS.**

EVERY CONNECTION COUNTS. EVERY SOLUTION MATTERS.

EMERGENCY FIBRE REPAIRS

Urgent Restoration Work.

In emergencies,
every minute counts.
Work safe, work fast,
restore service.

1 FIBRE CUT EMERGENCY

A fibre cut can cause major outages. Act quickly and assess the situation.

- FIRST RESPONSE CHECKLIST**
- ✓ Ensure personal safety
 - ✓ Secure the area
 - ✓ Identify the fault location
 - ✓ Report to NOC
 - ✓ Prepare for immediate repair

TIP Your safety and the public's safety come first.

2 NIGHT REPAIR OPERATION

Night work reduces disruption and helps restore service faster.

- NIGHT WORK TIPS**
- ✓ Use proper lighting
 - ✓ Wear high-vis clothing
 - ✓ Stay alert and focused
 - ✓ Communicate clearly
 - ✓ Follow safety procedures

TIP Good lighting, right tools, and communication keep the team safe and efficient.

3 TRAFFIC MANAGEMENT

Protect your team and the public by managing traffic safely.

- TRAFFIC CONTROL CHECKLIST**
- ✓ Place warning signs early
 - ✓ Use cones to create safe zone
 - ✓ Assign a spotter if needed
 - ✓ Keep lanes clear when possible
 - ✓ Follow local regulations

TIP A well-managed site prevents accidents and delays.

4 EMERGENCY SPLICING

Restore the fibre link with precision and speed.

- SPLICING STEPS**
- 1 Prepare and clean fibre ends
 - 2 Align fibres in splicer
 - 3 Perform fusion splice
 - 4 Protect splice with sleeve
 - 5 Place in splice closure

TIP Clean, align, and protect — that's a strong splice.

5 SERVICE RESTORATION

Test and verify the link to confirm service is back.

- RESTORATION CHECKLIST**
- ✓ Test signal and losses
 - ✓ Verify customer service
 - ✓ Update NOC
 - ✓ Document the repair
 - ✓ Inform stakeholders

TIP Test thoroughly. Restore completely.

6 JOB COMPLETE

Pack up, clear the site, and hand back the road safely.

- FINAL CHECKLIST**
- ✓ Remove all equipment
 - ✓ Clear the work area
 - ✓ Check for any hazards
 - ✓ Complete job report
 - ✓ Confirm service is stable

TIP Leave the site safe, clean, and professional.

GREAT WORK!
You restored connectivity and made a difference.

KEY TAKEAWAYS

SAFETY
FIRST

ACT FAST
STAY CALM

WORK AS
A TEAM

FOCUS ON
SOLUTIONS

RESTORE SERVICE
WITH QUALITY

WHEN FIBRE FAILS,
WE RISE TO RESTORE.
EVERY CONNECTION MATTERS.
EVERY MINUTE COUNTS.

PREPARED TEAMS.
STRONGER NETWORKS.

FAST RESPONSE.
RELIABLE RESTORATION.

CONNECTED COMMUNITIES.
BETTER TOGETHER.

WE DON'T JUST REPAIR FIBRE. WE RESTORE CONNECTIONS.

CUSTOMER SERVICE IN THE FIELD

Professional Customer Interaction.

Great service
builds trust.
We represent
Fireside Group in
every interaction.

1 GREETING CUSTOMERS

Greet customers warmly and introduce yourself and your purpose.

BEST PRACTICES

- ✓ Smile and be polite
- ✓ Introduce yourself and your company
- ✓ Confirm the purpose of the visit
- ✓ Ask before entering the property

TIP First impressions matter. Be friendly and confident.

2 EXPLAINING WORK CLEARLY

Explain the work you will do, how long it will take, and what the customer can expect.

KEY POINTS

- ✓ Use simple languages
- ✓ Explain the process
- ✓ Set clear expectations
- ✓ Answer questions patiently

TIP Clear communication builds understanding and trust.

3 RESPECTING CUSTOMER PROPERTY

Treat every customer's home or office with care and respect.

REMEMBER TO

- ✓ Keep work areas clean and tidy
- ✓ Use protective mats or coverings
- ✓ Handle items with care
- ✓ Leave the area neat after the job

TIP Respect shows professionalism.

4 HANDLING CONCERNS PROFESSIONALLY

Listen carefully to customer concerns and address them calmly and professionally.

HOW TO RESPOND

- ✓ Listen without interrupting
- ✓ Stay calm and respectful
- ✓ Apologize if needed
- ✓ Offer clear solutions or next steps
- ✓ Follow up to ensure satisfaction

TIP Calm, respectful responses turn problems into solutions.

KEY TAKEAWAYS

EVERY VISIT.

DELIVER GREAT SERVICE.
EVERY TIME.

GREAT SERVICE CONNECTS US ALL.

QUALITY INSTALLATION STANDARDS

Doing the Job Right.

Quality today
means reliability
tomorrow.

1 NEAT CABLE ROUTING

Route cables neatly along the best path. Avoid bends, slack, and unnecessary loops.

BEST PRACTICES

- ✓ Follow the shortest safe route
- ✓ Maintain proper bend radius
- ✓ Avoid tangles and slack
- ✓ Use clips or trunking
- ✓ Keep cable path clear and neat

TIP Neat routing protects the fibre and improves performance.

2 PROPER LABELING

Label all cables, ports, and equipment clearly and consistently.

LABELING CHECKLIST

- ✓ Use clear and legible labels
- ✓ Label both ends of the cable
- ✓ Use standard naming format
- ✓ Check labels before closing up
- ✓ Keep records updated

TIP Good labels save time and prevent mistakes.

3 SECURE MOUNTING

Mount all equipment and cables securely using the right hardware.

CHECK POINTS

- ✓ Use correct mounting hardware
- ✓ Ensure equipment is level and stable
- ✓ Secure cables at proper intervals
- ✓ No loose parts or hanging cables
- ✓ Follow site standards

TIP Secure mounting ensures safety and long-term reliability.

4 CLEAN FINISHING

A clean finish shows pride in your work and builds customer confidence.

FINISHING TIPS

- ✓ Use cable ties neatly
- ✓ Trim excess material
- ✓ Close all covers and panels
- ✓ Keep work area clean
- ✓ Leave a professional finish

TIP Clean work reflects professionalism and care.

5 FINAL INSPECTION

Inspect every detail before closing the job. Do it once, do it right.

INSPECTION CHECKLIST

- ✓ Check cable routing and bend radius
- ✓ Verify labels on both ends
- ✓ Ensure all mounts are secure
- ✓ Check for clean and safe finish
- ✓ Test signal and confirm performance
- ✓ Update records

TIP A thorough inspection guarantees a quality installation.

6 QUALITY IS OUR STANDARD

Every installation represents Fireside Group. Take pride in your work and deliver every time.

REMEMBER

- ✓ Do it right
- ✓ Do it safely
- ✓ Do it with pride
- ✓ Quality today, reliability tomorrow

GREAT WORK!
You build connections that people rely on every day.

QUALITY TODAY. RELIABILITY TOMORROW.

DOCUMENTATION & REPORTING

Field Reporting Standards.

Good documentation today ensures strong networks tomorrow.

1 UPDATING WORK ORDERS

Keep work orders accurate and up to date throughout the job.

UPDATE THESE ITEMS

- ✓ Customer details
- ✓ Job progress and status
- ✓ Materials used
- ✓ Time on site
- ✓ Notes and observations
- ✓ Customer signature

TIP Update in real time to avoid missed details.

2 CAPTURING INSTALLATION PHOTOS

Photos provide visual proof and help with quality assurance.

PHOTO CHECKLIST

- ✓ Before and after installation
- ✓ Cable routing and pathways
- ✓ Splice closure location
- ✓ Equipment serial numbers
- ✓ Wall plates and terminations
- ✓ Clear and in focus

TIP Clear photos = clear records.

3 RECORDING TEST RESULTS

Accurate test results confirm performance and ensure customer satisfaction.

RECORD THESE RESULTS

- ✓ OTDR traces and values
- ✓ Power meter readings
- ✓ Signal strength and quality
- ✓ Pass / Fail status
- ✓ Notes on any issues found

TIP Good records help you and your team.

4 CLOSING TICKETS PROPERLY

Complete all documentation and close tickets correctly.

BEFORE CLOSING

- ✓ Verify all work completed
- ✓ Confirm customer satisfaction
- ✓ Upload photos and test results
- ✓ Add final notes
- ✓ Close ticket in the system

TIP Close it right the first time.

COMPLETE RECORDS. STRONG NETWORKS. HAPPY CUSTOMERS.

TEAMWORK IN THE FIELD

Collaboration During Operations.

Great teams build strong networks. Together, we get the job done right.

1 TEAMS ASSISTING EACH OTHER

We look out for each other and support as a team.

- TEAM MINDSET**
- ✓ Help when someone needs it
 - ✓ Share knowledge and experience
 - ✓ Communicate clearly
 - ✓ Celebrate team success

TIP A helping hand today makes the job easier for everyone.

2 COORDINATING INSTALLATIONS

Good planning and communication keep our work smooth and efficient.

- COORDINATION CHECKLIST**
- ✓ Review the plan together
 - ✓ Assign roles and responsibilities
 - ✓ Confirm materials and equipment
 - ✓ Update each other throughout the job
 - ✓ Ensure safety at all times

TIP Coordinate well, work well, succeed together.

3 SHARING TOOLS

Share tools and equipment so the team can keep moving.

- TOOL SHARING RULES**
- ✓ Ask before borrowing
 - ✓ Return tools in good condition
 - ✓ Keep track of shared equipment
 - ✓ Report damaged or missing tools

TIP Sharing tools builds trust and gets the job done faster.

4 SUPPORTING TRAINEES

Guide and mentor trainees to build the skills of tomorrow.

- MENTOR TIPS**
- ✓ Explain the why behind the work
 - ✓ Demonstrate proper techniques
 - ✓ Encourage questions
 - ✓ Give positive feedback
 - ✓ Lead by example

TIP Your guidance today shapes a great technician tomorrow.

KEY TAKEAWAYS

SUPPORT

TOGETHER WE
DELIVER MORE

ONE TEAM.
ONE GOAL.
STRONGER NETWORKS.
BETTER FUTURE.

TEAMWORK
BUILDS SAFETY.

COMMUNICATION
BUILDS SUCCESS.

RESPECT BUILDS
STRONG TEAMS.

TOGETHER, WE MAKE
EVERY CONNECTION COUNT.

NETWORK MAINTENANCE OPERATIONS

Preventive Maintenance.

Prevent today,
perform better
tomorrow.

1 INSPECTING FIBRE ROUTES

Regular inspections help identify potential issues before they cause outages.

INSPECTION CHECKLIST

- ✓ Walk the route and inspect infrastructure
- ✓ Check for physical damage or obstructions
- ✓ Verify handholes and markers
- ✓ Look for exposed or at-risk cables
- ✓ Record findings and take photos

TIP Early detection prevents costly repairs and service disruptions.

2 CLEANING CABINETS

Clean cabinets ensure optimal performance and protect sensitive equipment.

CLEANING CHECKLIST

- ✓ Remove dust and debris
- ✓ Clean adapters and connectors
- ✓ Check ventilation and filters
- ✓ Ensure proper cable management
- ✓ Close and secure cabinet correctly

TIP A clean cabinet means a reliable network.

3 REPLACING DAMAGED SECTIONS

Timely replacement of damaged fibre keeps the network strong and stable.

REPLACEMENT STEPS

- ✓ Identify and confirm the fault
- ✓ Isolate and prepare the work area
- ✓ Remove damaged fibre section
- ✓ Splice or install new cable
- ✓ Test and verify restoration
- ✓ Secure and close enclosure

TIP Use quality materials and follow standards every time.

4 PREVENTIVE TESTING

Testing ensures the network is ready to deliver high-quality service.

TESTING CHECKLIST

- ✓ Perform OTDR test and analyze
- ✓ Check power levels with power meter
- ✓ Verify end-to-end connectivity
- ✓ Document results and trends
- ✓ Report and resolve any issues

TIP Test regularly to ensure performance and reliability.

WE PERFORM TOMORROW.

STRONG NETWORKS.
HAPPY CUSTOMERS.

LEADERSHIP IN FIELD OPERATIONS

Field Team Leadership.

Great leaders build great teams and deliver great results.

1 TEAM COORDINATION

Strong coordination keeps the team aligned, informed, and focused on the goal.

COORDINATION CHECKLIST

- ✓ Hold pre-job briefings
- ✓ Communicate clearly and regularly
- ✓ Ensure everyone understands the plan
- ✓ Monitor progress and adjust as needed
- ✓ End the job with a debrief

TIP Communication and coordination turn plans into performance.

2 JOB ALLOCATION

Assign the right people to the right tasks for maximum efficiency.

ALLOCATION CHECKLIST

- ✓ Understand the scope and priorities
- ✓ Match skills with tasks
- ✓ Balance workloads fairly
- ✓ Confirm resources and equipment
- ✓ Communicate assignments clearly

TIP Clear roles and responsibilities drive successful outcomes.

3 SAFETY ENFORCEMENT

A leader ensures safety is never compromised, not just complied.

SAFETY CHECKLIST

- ✓ Enforce PPE at all times
- ✓ Conduct risk assessments
- ✓ Follow safety procedures
- ✓ Stop unsafe acts immediately
- ✓ Lead by example

TIP Safety leadership protects our people and our reputation.

4 DECISION MAKING ON-SITE

Leaders make smart decisions that solve problems and keep jobs on track.

DECISION CHECKLIST

- ✓ Gather accurate information
- ✓ Identify potential impacts and risks
- ✓ Evaluate the best course of action
- ✓ Communicate the decision
- ✓ Review and learn afterwards

TIP Good decisions today prevent bigger problems tomorrow.

KEY TAKEAWAYS

LEAD AND INSPIRE YOUR TEAM

PLAN, ASSIGN, AND FOLLOW THROUGH
